This practical workshop guide deals with the principles and characteristics of the wide range of motors likely to be used in small engineering workshops: Speed control
Electric braking
Generators
Installation
Safety

Since the publication of the first edition, the book has become a well-established reference source on how motors behave and their applications. Over the years, a lot has happened in the field of motor design. This 2nd edition contains updated information about recent developments in motor types and their control systems, including the installation of VFD (Variable Frequency Drive Units). It also covers the operating differences between North American and European power systems. The technology involved in lubrication by nanoparticles is a rapidly developing scientific area and one that has been watched with interest for the past ten years. Nanolubrication offers a solution to many problems associated with traditional lubricants that contain sulphur and phosphorus; and though for some time the production of nanoparticles was restricted by the technologies available, today synthesis methods have been improved to such a level that it is possible to produce large quantities relatively cheaply and efficiently. Nanolubricants develops a new concept of lubrication, based on these nanoparticles, and along with the authors' own research it synthesises the information available on the topic of nanolubrication from existing literature and presents it in a concise form. Describes the many advantages and potential applications of nanotechnology in the tribological field. Offers a full review of the state-of-the-art as well as much original research that is yet unpublished. Includes sections on boundary lubrication by colloidal systems, nanolubricants made of metal dichalcogenides, carbon-based nanolubricants, overbased detergent salts, nanolubricants made of metals and boron-based solid nanolubricants and lubrication additives. Authored by highly regarded experts in the field with contributions from leading international academics. Nanolubricants will appeal to postgraduate students, academics and researchers in mechanical engineering, chemical engineering and materials science. It should also be of interest to practising

engineers with petroleum companies and mechanical manufacturers. Discusses the screwcutting function of the lathe, its ability to cut any form of external or internal thread of any thread form, pitch or diameter within the overall capacity of the machine. Using castings from your charcoal foundry (see Book 1 in the series: The Charcoal Foundry by David Gingery) and simple hand methods (no machine tools needed!) you can build a sturdy and accurate bed for a metal lathe. Then additional castings, common hardware items and improvised equipment will add the headstock, tailstock, carriage and all the remaining parts to complete the lathe. Illustrated with photos and drawings to show you all you need to know about patterns, molding, casting and finishing the parts. The lathe specs. include a 7" swing over the bed and 12" between centers. Adjustable tailstock with set-over for taper turning. Adjustable gibs in sliding members and adjustable sleeve bearings in the headstock. A truly practical machine capable of precision work. Once you have a foundry to cast the parts and a lathe to machine them you can tackle more exotic projects. Gears in one form or another are part of most mechanisms, but they are by no means as simple as they may appear. This book explains simply and comprehensively the underlying theory involved, and in its second part, how to cut gears on a lathe or milling machine. The mini-lathe is a useful tool in the model engineer's workshop. With more choice than ever of more compact machines, a mini-lathe is able to accommodate a wide range of engineering requirements, projects and techniques, as well as being suitable for the novice engineer and for those with limited workshop space. Author and model engineer Neil Wyatt provides a practical guide to purchasing and using a mini-lathe, as well as examining more advanced techniques. The book includes a projects section to show the application of mini-lathe techniques. Topics covered include: choosing a mini-lathe; workshop safety and setting up the lathe; basic through to more advanced machining skills; modifications, additions and tuning of the mini-lathe. This essential reference source is aimed at the novice engineer, home metalworkers and for those with limited workshop space. Fully illustrated with 304 colour photographs.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. This book reports on the state of the art in the field of multiphysics systems. It consists of accurately reviewed contributions to the MMSSD'2014 conference, which was held from December 17 to 19, 2004 in Hammamet, Tunisia. The different chapters, covering new theories, methods and a number of case studies, provide readers with an up-to-date picture of multiphysics modeling and simulation. They highlight the role played by high-performance computing and newly available software in promoting the study of multiphysics coupling effects, and show how these technologies can be practically implemented to bring about significant improvements in the field of design, control and monitoring of machines.

In addition to providing a detailed description of the methods and their applications, the book also identifies new research issues, challenges and opportunities, thus providing researchers and practitioners with both technical information to support their daily work and a new source of inspiration for their future research. A classic guide to using Myford's 7 series metalworking lathes in the home workshop. It revises the work to include the ML7, Super 7 and ML7-R lathes. To build electronic projects that can sense the physical world, you need to build circuits based around sensors: electronic components that react to physical phenomena by sending an electrical signal. Even with only basic electronic components, you can build useful and educational sensor projects. But if you incorporate Arduino or Raspberry Pi into your project, you can build much more sophisticated projects that can react in interesting ways and even connect to the Internet. This book starts by teaching you the basic electronic circuits to read and react to a sensor. It then goes on to show how to use Arduino to develop sensor systems, and wraps up by teaching you how to build sensor projects with the Linux-powered Raspberry Pi. Your child will spend hours of fun composing silly sentences and you can rest assured that they are learning while they play. It is possible to create an almost endless variation of sentences with the fun puzzle pieces and colour-coded cards. Encourage your child's early learning and curiosity while they giggle with glee at the silly sentences they have made! Build your own Metal Shaper. Exotic is a mild adjective when applied to this shaper. It will cut splines, keyways, gears, sprockets, dovetail slides, flat and angular surfaces and irregular profiles. And all of these with a simple hand-ground lathe tool bit. Obsolete in modern industry, of course, because milling machines do the work much faster and cheaper. But you can't beat a shaper for simplicity and economy in the home shop. The shaper has a 6" stroke and a mean capacity of 5" x 5", variable and adjustable stroke length, automatic variable cross feed and graduated collars. You will be proud to add this machine to your shop. In a post-nuclear world, Great Britain has emerged as a Fascist state. When young Evey Hammond is saved by a mysterious masked stranger, she is pulled into his quest to fight back and overthrow the government. The Sheet Metal Brake is also known as book 7 from the best selling 7 book series, 'Build Your Own Metal

Working Shop From Scrap'. I almost left this one out of the series and I would have if it were not for my friends who tell me they are always wanting to bend some sheet metal for a project. This one uses no castings. It's a welding project using standard structural steel and common hardware items to build a compact portable bending brake. Its a 15" brake as detailed but you can scale up or down in size within limits. Definitely not a heavy duty brake but you can make neat bends in 26 gauge metal to form duct, boxes, drawers, belt guards and dozens of items for your shop projects Some have beefed up the leaves and pivots so that metal as heavy as 20 gauge can be bent sharply. Charcoal Foundry, the first book in the "Metal Working Shop From Scrap Series", gives you plans for building a metal melting furnace and instructions on basic pattern making and molding. All the information needed to set up a foundry in your work shop can be found in this book. Simply stated, if you can build a sand castle or make a mud pie, you can make a sand mold to produce castings for your metal shop projects. The main ingredient in these projects is scrap aluminum and pot metal. The only tools you need to get started are ordinary home shop hand tools, many of which are probably already in your possession. Much of the remainder is found as salvage or cast-off and little expense need be involved. The charcoal foundry is simple to build and operate and the initial cost is so low that it can be in the reach of nearly anyone. And the fundamentals of pattern-making and molding are easily understood and mastered. Once you have built the charcoal foundry and the metal lathe in book 2, there is little beyond your reach by way of shop equipment. Build as large or small as you wish and you are your own parts supply company. If you already have some machine shop equipment, you will find that adding a foundry to your shop greatly expands your capacity. Being able to produce your own castings for accessories and equipment is a great advantage. Design your own, make a copy or follow a plan. It's easy when you're in control and can produce your own castings.
