Do Commas Matter? Consider the story about my friends were heir to Uncle Josef's estate. Well, Josef wasn't really anyone's uncle, but that's what everyone called him. Uncle Josef's Last Will and testament read, I leave my entire estate to my dear friends Robert, Rosie, Charley and Sophie. The problem? Robert and Rosie filed a lawsuit stating that Charley and Sophie together were due a third of Uncle Josef's estate. Why? Uncle Josef hadn't placed a comma between Charley and Sophie. The judge agreed. Anyone who ever know uncle Josef has been careful about their pauses ever since. At last! A book on punctuation that is not a mere reference book: rather, this book invites readers on a personal journey... meant to be read cover-to-cover, this book effectively takes he mystery out of punctuation and provides practice on essential writing skills. --Elisabeth Anderson, Writing Instructor, College of DuPage A straight-forward handbook that has been infinitely more useful than any handbook or workbook I've used in college. --Dominie Schiralli, Fine Arts Major, Indiana University Northwest Students who used this method had a much easier time with composition. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Meteorology The Earth was created to be the dwelling place of man. It is a complex world and its weather patterns affect our lives every day. Whether you live near the equator, a polar region, or somewhere in between, knowledge of the weather is important. The Weather Book will teach you: why our exact distance from the sun allows life on earth, how the weather on the other side of the earth affects you, how clouds form and how to identify the different types, what the difference is between a cold and warm front, why you can often see lightning long before you can hear thunder, how to build your own weather station, how to survive in dangerous weather, what the greenhouse effect and the ozone hole are, what Noah's flood and the Ice Age have in common, how weatherpersons forecast hurricanes and tornadoes, how to read a weather map, and what our responsibility is to the environment. Learning about the weather is fun! It will change the way you look at the clouds in the sky. Now you'll have more of an understanding about what is going on miles above your head. And when you hear a weather report on television, you will understand so much more about the world around you!. Semester 2: Astronomy One thing we have in common with the ancients is that all of the human race has gazed at the night sky, and the bright morning, and wondered, "What's out there?" Our universe is so vast and awe-inspiring that to learn about it is to learn about ourselves. The Astronomy Book will teach you: what long-ago astronomers thought about other worlds, solar system facts, how constellations relate to astrology, the history of space exploration, black holes-do they exist?, the origin and age of the moon, why Mars doesn't support life, the composition of stars, supernova remnants, and the myth of star birth, asteroid legends and the extinction of the dinosaurs, are there planets outside our solar system, and could they be home to intelligent life?, what are UFOs?, and the age of comets and meteor showers. Learning about the universe is huge fun! In the almost infinite expanse above us, we can examine planets, galaxies, and phenomena so beautiful and complex that we never outgrow a childlike wonder. We see our own reflection in the moon, the stars, and in comet trails. The more we learn, the less we fear! This resource book of vocabulary practice activities enables teachers to teach vocabulary communicatively in the classroom. Learner-centred in its approach, the material has the dual aim of helping students acquire vocabulary and develop skills and strategies for effective learning. Redesigned from the original version, this photocopiable resource pack retains a fresh approach to vocabulary learning. The book provides a variety of stimulating activities which require learners to actively use the target vocabulary. It develops learning skills, helping learners to become more efficient in organising, storing and remembering new vocabulary. It is easy to use with clear teacher's notes on the left hand pages and facing photocopiable worksheets on the right. The resource book is accompanied by a cassette (Lower Intermediate to Intermediate only) for further practice of the key vocabulary. Survey of Science History & Concepts Course Description Students will study four areas of science: Scientific Mathematics, Physics, Biology, and Chemistry. Students will gain an appreciation for how each subject has affected our lives, and for the people God revealed wisdom to as they sought to understand Creation. Each content area is thoroughly explored, giving students a good foundation in each discipline. Semester 1: Math and Physics Numbers surround us. Just try to make it through a day without using any. It's impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics. Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend.

Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia first hand during fun and informative experiments. Exploring the World of Physics is a great tool for student who want to have a deeper understanding of the important and interesting ways that physics affects our lives. Semester 2: Biology and Chemistry The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. Exploring the World of Biology is a fascinating look at life-from the smallest proteins and spores, to the complex life systems of humans and animals. Chemistry is an amazing branch of science that affects us every day, yet few people realize it, or even give it much thought. Without chemistry, there would be nothing made of plastic, there would be no rubber tires, no tin cans, no televisions, no microwave ovens, or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries, and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. Exploring the World of Chemistry brings science to life and is a wonderful learning tool with many illustrations and biographical information. Young scientists will be thrilled to explore the invisible world of atoms, molecules and elements. Our resource provides ready-to-use information and activities for remedial students using simplified language and vocabulary. Students will label each part of the atom, learn what compounds are, and explore the patterns in the periodic table of elements to find calcium (Ca), chlorine (Cl), and helium (He) through hands-on activities. These and more science concepts are presented in a way that makes them more accessible to students and easier to understand. Written to grade and using simplified language and vocabulary and comprised of reading passages, student activities, crossword, word search, comprehension quiz and color mini posters, our resource can be used effectively for test prep and your whole-class. All of our content is aligned to your State Standards and are written to Bloom's

Taxonomy and STEM initiatives. Applied Science: Studies of God's Design in Nature Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Made in Heaven Science shamelessly steals from God's creation, yet refuses to give God the glory! Discover how the glow of a cat's eyes innovates road reflectors, the naturally sticky inspirations for Velcro and barbed wire, as well as a fly's ear, the lizard's foot, the moth's eye, and other natural examples are inspiring improvements and new technologies in our lives. Engineers and inventors have long examined God's creation to understand and copy complex, proven mechanics of design in the science known as biomimicry. Much of this inspiration is increasingly drawn from amazing aspects of nature, including insects to plants to man, in search of wisdom and insight. We are surrounded daily by scientific advancements that have become everyday items, simply because man is copying from God's incredible creation, without acknowledging the Creator. Champions of Invention The great minds of the past are still with us today, in many ways. Individuals who explored the natural world hundreds and thousands of years ago have given us a treasure of knowledge in all the sciences. In this exciting series from educator/author John Hudson Tiner, short biographies of the world's most gifted thinkers will inspire the leaders of tomorrow. Study the life of the "forgotten" inventor, Joseph Henry, whose exploration of electricity set the standard for later innovators. Find out how a personal tragedy paved the way for Samuel F.B. Morse to put aside his painting and develop the telegraph. These valuable learning guides will give students accurate accounts of lives from the halls of science, and explain what those scientists believed about the world around them. Discovery of Design From the frontiers of scientific discovery, researchers are now taking design elements from the natural world and creating extraordinary breakthroughs that benefit our health, our quality of life, and our ability to communicate, and even help us work more efficiently. An exciting look at cutting-edge scientific advances, Discovery of Design highlights incredible examples that include: How things like batteries, human organ repair, microlenses, automotive engineering, paint, and even credit card security all have links to natural designs Innovations like solar panels in space unfurled using technology gleaned from beech tree leaves, and optic research rooted in the photonic properties of opal gemstones Current and future research from the fields of stealth technology, communications, cosmetics, nanotechnology, surveillance, and more! Take a fantastic journey into the intersection of science and God's blueprints for life — discovering answers to some of the most intricate challenges we face in a multi-purpose educational supplement.
