*function f ngk sh?n a relationship between two sets that matches each member
of the first set with a unique member of the second set functions are often
expressed as an equation such as $y = x + 5$ meaning that y is a function of x such
that for any value of x there is a unique value of y noun func tion ?f?? k sh?n synonyms of function 1
professional or official position occupation his job combines the functions of a
manager and a worker 2 the action for which to have or perform a function serve
functioned as ambassador 2 to deal with or overcome the challenges of everyday
life for weeks after his friend s funeral he simply could not function latin f?ncti?
f?ncti?n performance execution from f?nctus past participle of a function is
uniquely represented by the set of all pairs $(x, f(x))$ called the graph of the function a
popular means of illustrating the function note 1 4 when the domain and the
codomain are sets of real numbers each such pair may be thought of as what is a
function in maths a function in maths is a special relationship among the inputs i
e the domain and their outputs known as the codomain where each input has
exactly one output and the output can be traced back to its input types of
functions in maths an example of a simple function is $f(x) = x^2$ in this function the
function $f(x)$ takes the value of x and then function in mathematics an expression
rule or law that defines a relationship between one variable the independent
variable and another variable the dependent variable functions are ubiquitous in
mathematics and are essential for formulating physical relationships in the
sciences a function relates an input to an output saying $f(4) = 16$ is like saying 4 is
somehow related to 16 or 4 16 example this tree grows 20 cm every year so the
height of the tree is related to its age using the function $h = 20 \times \text{age}$ so if the
age is 10 years the height is $h = 200$*
